

Bin marker strips — black & white

Print at 100%

No fit-to-page, or the bars stop being whole units and the rhythm stops resolving. Matte stock: gloss under a ceiling lamp throws a highlight that washes the colour out of exactly the bars being measured.

Cut on the dashed line

The white at the two ends is part of the marker — it is what tells the scan where the strip stops. The few millimetres above and below are only for cutting.

Mount inside, and level

The bins are in pull-out drawers, so the strip goes on the rim of the drawer wall, where a shut drawer hides it under the counter. Visible means open, and that is the entire signal. The scan walks rows and columns, so a strip lying flat or standing upright is found and one at an angle is not.

Mount near the front of the rim

A drawer does not reveal the marker all at once — it slides out from under the counter edge. Near the front, the strip clears that edge early; near the back it needs the drawer pulled almost the whole way.

Which size to print

Start large and work down. In the debug overlay each strip reports two numbers: *unit px*, the samples per printed unit — under six the bar widths stop separating — and $\times n$, how many scan lines cross it, where three is the floor.

Nothing to calibrate

Identity here comes from the bar rhythm alone, so there is no colour to record. The trade is that a strip too small or too soft to measure is not a bin read uncertainly — it is a bin lost entirely. This style wants a larger print than colour does.

Marker strips — 6 mm unit

Stickers 72 – 84 mm long, 20 mm tall. Print at 100% — no fit-to-page. Matte stock.

MARKER 1 · ONE WIDE BAR

Bin: _____

MARKER 2 · 2 WIDE BARS

Bin: _____

MARKER 3 · 3 WIDE BARS

Bin: _____

Marker strips — 8 mm unit

Stickers 96 – 112 mm long, 20 mm tall. Print at 100% — no fit-to-page. Matte stock.

MARKER 1 · ONE WIDE BAR

Bin: _____

MARKER 2 · 2 WIDE BARS

Bin: _____

MARKER 3 · 3 WIDE BARS

Bin: _____

Marker strips — 10 mm unit

Stickers 120 – 140 mm long, 20 mm tall. Print at 100% — no fit-to-page. Matte stock.

MARKER 1 · ONE WIDE BAR

Bin: _____

MARKER 2 · 2 WIDE BARS

Bin: _____

MARKER 3 · 3 WIDE BARS

Bin: _____

Marker strips — 12 mm unit

Stickers 144 – 168 mm long, 20 mm tall. Print at 100% — no fit-to-page. Matte stock.

MARKER 1 · ONE WIDE BAR

Bin: _____

MARKER 2 · 2 WIDE BARS

Bin: _____

MARKER 3 · 3 WIDE BARS

Bin: _____

Marker strips — 15 mm unit

Stickers 180 – 210 mm long, 20 mm tall. Print at 100% — no fit-to-page. Matte stock.

MARKER 1 · ONE WIDE BAR

Bin: _____

MARKER 2 · 2 WIDE BARS

Bin: _____

MARKER 3 · 3 WIDE BARS

Bin: _____

Marker strips — 18 mm unit

Stickers 216 – 252 mm long, 20 mm tall. Print at 100% — no fit-to-page. Matte stock.

MARKER 1 · ONE WIDE BAR

Bin: _____

MARKER 2 · 2 WIDE BARS

Bin: _____

MARKER 3 · 3 WIDE BARS

Bin: _____

How thin can it be

Marker 1 at a 10 mm unit, in six heights. Three scan lines have to cross a strip before it counts, so the short side is what a rim actually limits. Mount the tallest that fits, then read the x_n in the debug overlay — three is the floor.

4 MM BARS · 10 MM STICKER · MARKER 1

6 MM BARS · 12 MM STICKER · MARKER 2

8 MM BARS · 14 MM STICKER · MARKER 3

11 MM BARS · 17 MM STICKER · MARKER 1

14 MM BARS · 20 MM STICKER · MARKER 2

20 MM BARS · 26 MM STICKER · MARKER 3
